Beth Shuck

Project Manager

As a project manager at GBS, Beth directs the LEED certification efforts for a variety of project types that include institutional, office buildings, higher-educational and municipal facilities. Under her direction, project teams work collectively to pursue high-performance design strategies along the most appropriate path relative to their construction budget and schedule. As a LEED project manager, she facilitates eco-charrettes, provides LEED assessment and consulting and manages final documentation for submission to the USGBC.

Prior to joining GBS, Beth worked on several utility based energy conservation programs. Beth studied Urban Planning, earning a masters degree that allowed her to focus on sustainability issues within the context of urban development.

In addition to her work as a project manager, Beth assists in the development of presentations for industry professionals and clients, covering topics from green building design strategies to understanding LEED.
