Peter Walker-Keleher

PE, LEED AP

Consultant

As a consultant, Peter works closely with clients to integrate green building strategies throughout the design and construction process. Peter is skilled at helping clients identify sustainability goals, strategies and actions that fit well with their overall mission and vision. Building on his unique background as a civil/mechanical engineer and educator with over seven years of experience on a variety of project types including high-rise residential, commercial, and mixed-use, Peter helps project teams stay focused on the core sustainability goals by adeptly engaging them on a variety of issues, ranging from rainwater harvesting to heat recovery ventilators to sizing of solar hot water systems.

Under his direction, project teams, including owners, architects, contractors, and other design professionals, work collectively to pursue high-performance design strategies along the most appropriate path relative to their construction budget and schedule.

Peter also oversees the documentation process for projects pursuing LEED (Leadership in Energy and Environmental Design) certification, and has consulted with the US Green Building Council (USGBC) by reviewing LEED applications, writing sections of the LEED 2009 Reference Guide, and drafting Credit Interpretation Request (CIR) rulings.
