“Daylighting and LEED; Turning Failure into Success” Rethinking Sustainable Construction, September 2006

Wendy W Landry

AIA

Associate Principal

Wendy is an architect with more than 20 years of experience. She is passionate about green building, and has managed the certification of dozens of LEED projects, including Florida’s first LEED certified building.

As an associate principal and manager of Green Building Services’ Orlando office, Wendy oversees project consulting on a broad range of project types and LEED rating systems. Her experience includes LEED-NC, LEED-CS and LEED-CI projects within education, retail, industrial, multi-family residential and office market sectors. Under her direction, project teams work collectively to pursue high-performance design strategies along the most appropriate path relative to their construction budget and schedule. Wendy facilitates eco-charrettes to assist project teams in identifying opportunities for creating high-performance buildings, and then helps teams incorporate these strategies into their construction documents and specifications. She also acts as a reviewer for the U.S. Green Building Council, performing reviews of projects seeking LEED certification. This experience has provided Wendy with in-depth insight into the LEED Rating Systems and their application to projects.

In addition to her work as a consultant, Wendy has delivered numerous presentations on sustainable design and green building strategies throughout the United States. These presentations have addressed specific topics such as sustainable site development, daylighting, rainwater harvesting and concrete, as well as various aspects of the LEED Rating Systems.
