# Katrina Shum Miller

NZIA, Associate AIA

## Principal

With over 15 years of project experience in the U.S., New Zealand, and Malaysia, Katrina possesses an extensive knowledge of high performance building design, as well as sustainability and urban design strategies. Her expertise lies in bio-climatic building and urban design strategies, ecologically sensitive planning and community design, space planning and project management.

With Green Building Services, Katrina has a proven record of working with clients to identify and prioritize green building strategies that optimize performance, occupant health and comfort, while providing value to the project and stakeholders. She brings to project teams an ability to articulate in clear and concise terms the intention and significance of LEED® credit requirements to a particular project. With her focus on finding simple and effective solutions, coupled with her strong understanding of sustainability and LEED, she has earned a reputation for exceeding client expectations.

Katrina applies her expert understanding of the LEED rating system to projects ranging from new hospitals and schools to civic centers and higher educational facilities. She is currently the lead sustainability consultant for several key projects including numerous K-12 and higher educational projects. She was the LEED project manager for Clackamas High School; the first LEED Silver certified traditional high school in the country.

She leads eco-charrettes, sustainability project design meetings, facilitates green building strategies workshops and research efforts in bio-climatic green building design, alternative technologies, green specifications and products. Katrina manages Green Building Services contracts with the USGBC to assist with LEED certification reviews, in addition to managing the LEED for Retail pilot program.

As a member of the USGBC LEED for Schools Core Committee, she has been actively involved first-hand with the development of the LEED for Schools for New Construction Rating system. She also developed and presents the LEED for Schools training module for the USGBC. She is a frequent speaker at national conferences, including the USGBC/ Turner Green Schools Symposium, GreenBuild, EnvironDesign, Greening the Heartland, and numerous LEED workshops throughout the Pacific Northwest.
